### 3 Important Objects in Hibernate

01:08

10:20

## 3 Important Objects in Hibernate

- a) Configuration Object
- b) SessionFactory Object
- c) Session Object

*Keeping these 3 objects ready, this is called bootstrapping of hibernate framework*

11:29

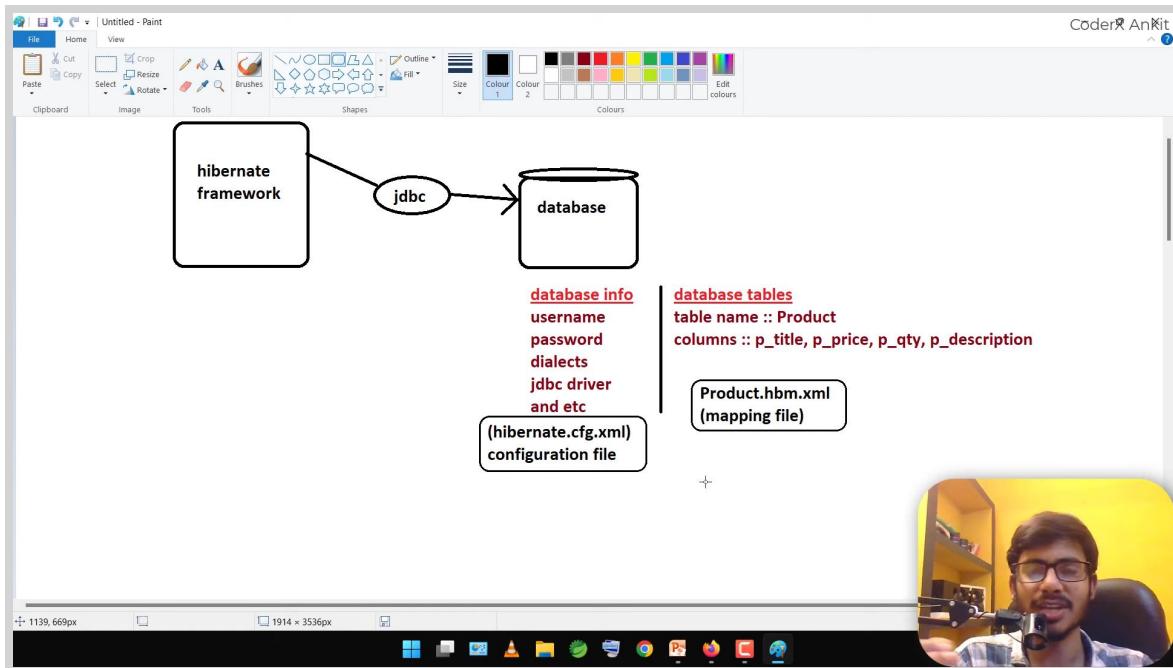

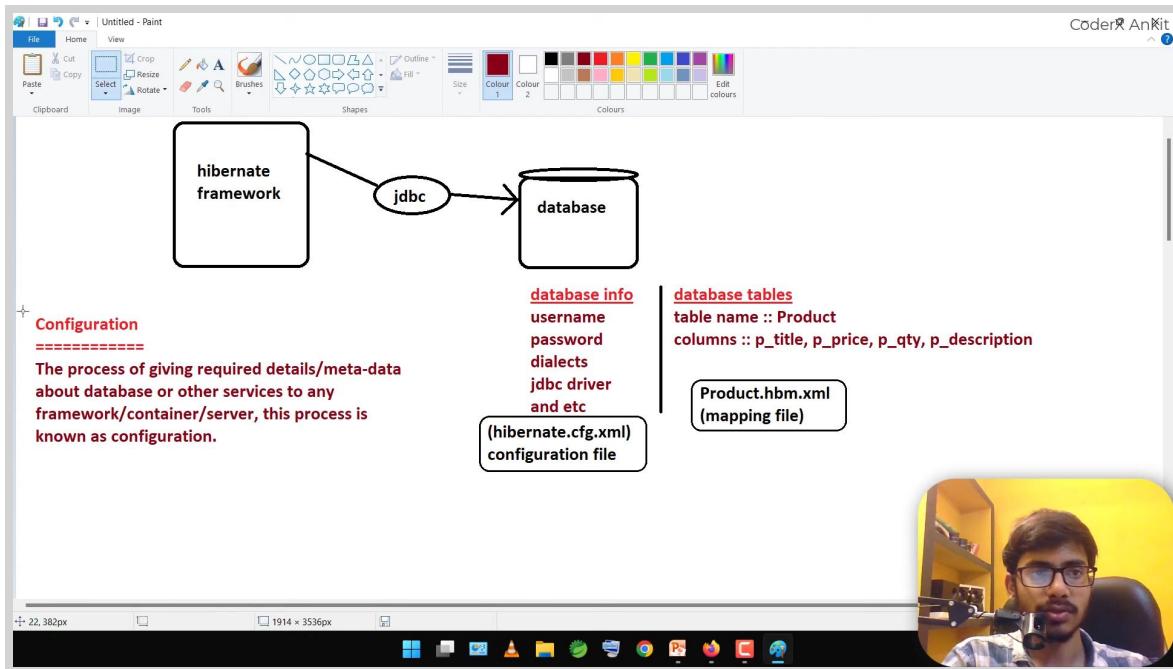

### Configuration object

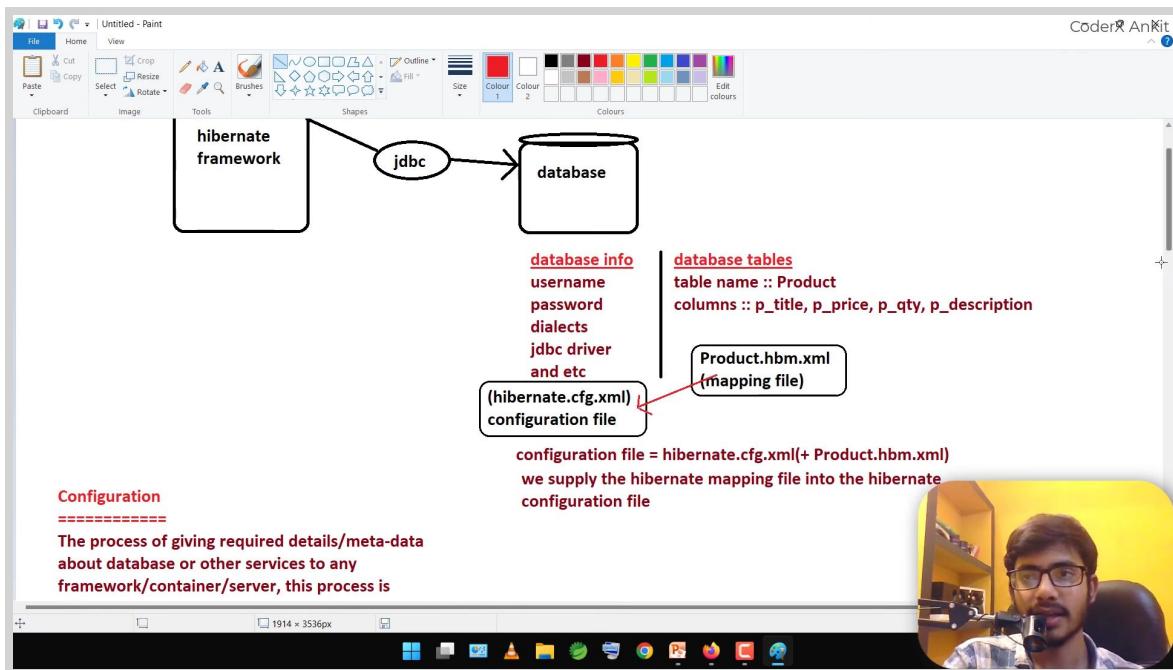

- Configuration is a class present in **org.hibernate.cfg** package.
- This object takes **hibernate configuration file name and location** as input value and also takes hibernate mapping file name and location through hibernate configuration file.
- This class is given based on **builder design pattern**.
- Using this object we can create **SessionFactory object**.
- In case, no **hibernate configuration file name** is supplied, then it will take “**hibernate.cfg.xml**” file from classpath (src folder of your project) as default configuration file.

```
Configuration cfg = new Configuration();
cfg.configure(); // takes hibernate.cfg.xml as default configuration file name
cfg.configure("com/coderxankit/cfgs/mycfg.xml"); // takes given configuration file name
```
